Positions	35-45
Investment horizon	3-5 years
Inception Date	12/31/2008

INVESTMENT PHILOSOPHY AND PROCESS

We seek superior returns through holding a concentrated portfolio of companies that we believe have advantaged business models and opportunities to generate consistent, long-term growth of intrinsic business value.

IDEA GENERATION/DILIGENCE

- Fundamental, qualitative approach
- Generalist analyst structure
- Low turnover leads to high threshold rates for new ideas
- ESG risk and opportunity assessment
- Preferred company characteristics:
  - Fundamental change
  - Superior business model
  - Significant free cash flow generation
  - High returns on invested capital
- Collaborative group vetting informs PM decisions

PORTFOLIO CONSTRUCTION

- Benchmark agnostic
- Conviction based weights balancing risk and reward
- Majority of the portfolio consists of all-weather stocks

Strategy Review

For the third quarter of 2021, the Global Growth Portfolio underperformed its benchmark, the MSCI All Country World Index. While performance was largely driven by our stock exposure, on a sector level, consumer discretionary was the largest detractor and health care was the largest contributor to performance.

TOP CONTRIBUTORS AND DETRACTORS

Contributors

Datadog Inc Class A, an enterprise software company that allows companies to monitor and analyze their cloud-based infrastructure, was a contributor to performance during the quarter. Datadog reported another quarter of strong earnings, accelerating again from the company's growth in the prior period with improving unit economics and overall company profitability. The company also provided disclosure on the size and growth of some nascent products (Application Performance Monitoring and logging) that was viewed positively by the market, and we believe reinforces our thesis that the company is becoming the leading platform for cloud-based observability software. We believe the market is underestimating the traction of Datadog's emerging platform strategy and rapid product innovation that we feel will sustain high levels of growth at attractive economics for many years.

Snowflake, Inc. Class A, a cloud-based data warehousing company, was a contributor to performance during the quarter. The company reported a strong and above-consensus earnings result that saw net revenue retention (NRR) accelerate from 168% to 169%, relative to consensus expectations of a steep deceleration. Despite now counting as customers ~40% of the F500 and ~25% of the G2000, we believe the durability of NRR demonstrates how early we still are on the adoption curve. As we look out five years, we continue to believe the market implies a steeper deceleration in NRR than is likely to occur, which may drive continued upward earnings revisions as well as our estimate of intrinsic business value materially above the current price. Additionally, positive traction continues in data marketplace as the potential remains for that platform to transform from a customer acquisition tool to a profit center all its own, representing a sizable free option the market is not underwriting. We believe SNOW's runway for mind and dollar share, durability of investment spending capability, and broader platform monetization potential are all under-appreciated, as SNOW proves both a beneficiary and accelerator of enterprise cloud adoption over the next decade.

DexCom, Inc., a leading provider of consumable continuous glucose monitoring devices which help diabetic patients better manage their condition, was an outperformer in the quarter. The company reported strong quarterly results which evidenced progress on their plan to drive down costs in order to more broadly penetrate this large end market while preserving their profitability. Dexcom leads in serving patients with type 1 diabetes, and with smart investments and valuable software integrations with key partners in the medical system, Dexcom is well positioned to serve the very large market of type 2 diabetes globally.

Detractors

Bilibili, Inc. Sponsored ADR Class Z, a popular video entertainment platform in China, was a detractor from performance during the quarter. The stock performed poorly in Q3 2021 amid regulatory pressure in China. The Chinese government has been stepping up regulatory reform on everything from tutoring companies, to anti-monopoly practices, to gaming, impacting notable high-profile stocks. We think Bilibili is positioned favorably relative to its technology peers due to its size and domain. With regard to youth gaming, Bilibili has taken proactive steps to monitor and collaborate with the government. Bilibili has also diversified revenue streams with advertising and live streaming. Lastly, third party data shows Bilibili's monthly active users trend is weaker than usual post summer. However, this has been true for all major Chinese internet platforms in China and isn't a Bilibili specific issue. We continue to believe there is a sustainable runway for growth in both users and revenues and that the company will continue to evolve into the dominant user-generated video content platform in the Chinese internet sector.

Wix.com Ltd., a cloud-based web development platform, was a detractor from performance during the quarter. Shares reversed strong year-to-date performance after the company reduced its 2021 guidance. The company, like most other internet businesses, saw weakness in demand in the last few weeks of the quarter. Despite the temporary moderation of demand, we are nonetheless impressed by the implied continued strong levels of growth after lapping the COVID-19 demand surge. Longer–term, we believe the opportunity remains attractive, due in part to the fact that there are over 400 million small and medium size businesses in the company's target market--the majority of which have yet to obtain an online presence. We believe such a presence is becoming more necessary given COVID-19 disruptions and other challenges to the physical presence of many companies, along with the need to efficiently market online to customers.

Zoom Video Communications, Inc. Class A, a video-first communications platform, was a detractor from performance during the quarter. Zoom announced stellar results with revenue growing 54% and free cash flow margins of 45%. However, the company is seeing increased churn and less new demand from self-serve/SMB customers that represent roughly one-third of the business. This is not a surprise to us, and our thesis hinges on their success in Commercial customers and becoming a broader platform selling services beyond videoconferencing. We believe the "hybrid workplace" will be a core pillar of enterprise's digital infrastructure strategy over the next five years, with Zoom well-positioned to benefit. The pandemic was likely a once-in-a-century exogenous event that catapulted Zoom's brand to gold-standard status while simultaneously supercharging its go-to-market efficiency and unit economics, all of which we think will prove long-lasting.

Market Review and Outlook

COVID-19 continued to be a driving factor in market volatility in the third quarter. The Delta variant forced companies across industries and geographies to reassess forecasts for the second half of the year as the timing and breadth of re-opening became increasingly less certain. This uncertainty drove broad underperformance in healthcare names, while continued supply chain issues and inflation uncertainty plagued the consumer discretionary sector. Inflation fears spiked at the end of the quarter, weighing on long-duration growth names, which underperformed after having made up some ground relative to the value rotation that has largely dominated 2021. In addition to these concerns, the breadth and depth of Beijing's intervention in the Chinese economy accelerated, furthering that market's selloff. The markets remain focused on near-term catalysts and are seemingly awaiting further evidence of economic recovery to assign credit to longer-term trends of fundamental performance.

The economic backdrop remains accommodative to equity prices, although with a sustained higher level of volatility and market concerns over the potential inflation impact of a return to normal business activity. The U.S. market has possibly passed the peak of negative impacts brought by the Delta variant and investors have now turned their attention to assessing the level and profile of economic recovery. The back and forth between growth and value factors noted above demonstrated investors' wrestling with the nature of the recovery: will a post-COVID world unleash an unrestricted economic boom that favors the most cyclical companies; or are there enough limiting factors in play to put a cap on economic growth and therefore favor secularly-growing companies, those more in control of their own destinies? Furthermore, there is increasing investor focus on assessing the impact of potential Biden Administration policy changes, including the latest political battles—some inside the administration's own party—on how far to go on aggressive spending programs in infrastructure and social services. The third quarter demonstrated the tension between recent periods of growing enthusiasm of economic recovery, only to end with a month of concerns over the pace of economic recovery, the impact of a potential higher interest rates, and political battles clouding clear fiscal policy outcomes. Much like the third quarter itself, the translation of these complicated factors to equity prices makes the market outlook for the fourth quarter and into 2022 less clear, especially given the strong absolute equity returns already posted this year (albeit varied considerably depending on market capitalization segments).

At Jackson Square, our portfolio turnover increased at the onset of COVID in early 2020 as we took advantage of market volatility to purchase companies at some of the largest discounts to intrinsic business value we have seen since the Global Financial Crisis over a decade ago. We have returned to a lower, more typical level of turnover in recent periods, though we continue to seek to rebalance into asymmetrical risk/reward in our highest conviction holdings. We remain vigilant in watching for volatility that may give us more opportunities to enhance and refine the portfolio.

Regardless of policy outcomes and oscillating investor sentiment, we remain consistent in our long-term investment philosophy: we want to own what we view as strong secular-growth companies with great competitive positions that can grow market share and have the potential to deliver shareholder value in a variety of market environments.

PERFORMANCE DISCLOSURES: GLOBAL GROWTH COMPOSITE

Jackson Square Partners claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS standards. Jackson Square Partners has been independently verified for the periods May 1 2014 through December 31, 2020. A firm that claims compliance with the GIPS standards must establish policies and procedure for complying with all the applicable requirements of the GIPS standards. Verification provides assurance on whether the firm's policies and procedures related to composite and pooled fund maintenance, as well as the calculation, presentation, and distribution of performance, have been designed in compliance with the GIPS standards and have been implemented on a firm-wide basis. The Global Growth Composite ("Composite") has had a performance examination for the periods January 1, 2009 through December 31, 2020. The verification and performance examination reports are available upon request. A list of the firm's limited distribution pooled fund descriptions and a list of broad distribution pooled funds is available upon request. GIPS® is a registered trademark of CFA Institute. CFA Institute does not endorse or promote this organization, nor does it warrant the accuracy or quality of the content contained herein.

Jackson Square Partners is a registered investment adviser established on May 1, 2014. Registration does not imply a certain level of skill or training. Jackson Square Partners manages domestic and global growth equity strategies for institutional and retail clients. Performance shown prior to May 1, 2014 represents results achieved by the Jackson Square Partners team at Delaware Investments prior to the establishment of Jackson Square Partners. Delaware Investments claims compliance with the GIPS standards and was previously verified.

The Composite invests primarily in common stocks of U.S. and non-U.S. growth oriented companies located in developed and emerging market countries that the firm believes have long-term capital appreciation potential and may grow faster than the U.S. economy. The Composite has a concentrated portfolio of equities. The Composite was created and incepted in January 2009. The Composite includes all discretionary, fee paying accounts, including pooled funds managed in this strategy. Performance results are shown as total returns, net of dividend withholding taxes, assume reinvestment of dividends and capital gains, are presented before and after the deduction of investment advisory fees, and are calculated in U.S. dollars. The returns of some accounts in the Composite may include income from securities lending. Net returns are calculated using a model investment advisory fee derived by applying the strategy's maximum fee schedule in effect for the respective period, monthly. The current fee schedule for the strategy is as follows: first $100 million, 0.75%; next $100 million, 0.65%; next $300 million, 0.55%; amounts over $500 million, 0.45%. Jackson Square Partners investment advisory fees are described in Part 2A of the firm's Form ADV. Some clients may utilize a performance-based fee. Actual advisory fees can vary among clients employing this strategy and may be higher or lower than model investment advisory fees. Policies for valuing investments, calculating performance and preparing GIPS Reports are available upon request. A list of composite descriptions is available upon request. Past performance is not an indicator of future results. Internal dispersion is calculated using the asset-weighted standard deviation of the annual returns of all the portfolios that were included in the Composite for the entire year. Internal dispersion is only shown if the Composite has at least six accounts that were managed for the full calendar year. All risk measures presented are calculated using gross-of-fees returns.

The three-year annualized standard deviation measures the variability of the Composite and the benchmark over the preceding 36-month period. This measure is not required to be presented when 36 monthly composite returns are not yet available.

The benchmark for the Composite is the MSCI All Country World Index. The MSCI All Country World Index is a free float-adjusted market capitalization weighted index designed to measure equity market performance across developed markets world-wide. Index "net" return reflects minimum possible dividend reinvestment, after deduction of withholding tax at the highest possible rate. For comparison purposes, the index is fully invested and includes the reinvestment of income. Index returns do not reflect management fees, transaction costs, or expenses. The index referenced in prior presentations was MSCI World Index (net). The firm has retroactively applied MSCI All Country World Index for prior performance periods due to the fact that it more appropriately reflects the investment strategy. There would be differences in performance between the indices. Indices are unmanaged, and one cannot invest directly in an index. Benchmark information contained herein has been obtained from third party sources believed to be reliable, but we cannot guarantee its accuracy or completeness. All third-party marks are the property of their respective owners. The benchmark returns are not covered by the report of independent verifiers.

International investments are subject to risks not ordinarily associated with U.S. investments including capital loss from unfavorable fluctuation in currency values, differences in generally accepted accounting principles, or economic or political instability in other nations. Investing in emerging markets can be riskier than investing in established foreign markets due to increased volatility and lower trading volume.

Because the strategy expects to hold a concentrated portfolio of a limited number of securities, the strategy's risk is increased because each investment will have a greater effect on the strategy's overall performance.

This is not an offer of any product or service in any jurisdiction where it would be unlawful to do so under the laws of that jurisdiction.

The information presented is available for institutional one-on-one presentations only. It is not intended and should not be construed to be a presentation of information concerning any U.S. mutual fund.
